Another difference between the formation of diamond verses the formation of coal, is that coal manifests as horizontal, or close to horizontal ,rock units composed of sedimentary rocks. In contrast, diamonds' source rocks consist of pipes that are vertical and filled with igneous rocks.

### Coal to diamond? This is how that works

Conversion of coal to diamonds is a natural process that takes millions of years. Even though there are carbon atoms in coal, the amount of impurities are so high, that it takes millions and millions of years for the coal to transform to its nearly purest form - graphite. The conversion of graphite to diamonds takes some more millions of years.

### How Does Coal Become a Diamond? Excavating the Truth ...

Many people believe that diamonds are formed from the metamorphism of coal. That idea continues to be the "how diamonds form" story in many science classrooms. Coal has rarely - if ever - played a role in the formation of diamonds. In fact, most diamonds that have been dated are much older than ...
