The density equation is density equals mass per unit volume or $D = M / V$. The key to solving for density is to report the proper mass and volume units. If you are asked to give density in different units from the mass and volume, you will need to convert them.

Density. What we are actually comparing is the mass per unit volume, that is, the density. In order to determine these densities, we might weigh a cubic centimeter of each syrup. If the heavy syrup weighed 1.30 g and the light 1.15 g, we could describe the density of heavy syrup as 1.30 g cm⁻³ and that of light syrup as 1.15 g cm⁻³. (Note that the negative exponent in the units cubic ...
